Best Value For Money

Introduction

The EC2U Project is a critical initiative that aims also to build and extend the digital infrastructure to support the development of a common digital space for mobilities of students, staff and faculty members of the Alliance of seven European Universities. The success of this project hinges on the selection of a highly skilled and experienced partner to design, develop and maintain the underlying infrastructure. The wideness of the Project and its complexity make the selection of the partner even more challenging being the required expertise not common in the IT landscape.

Strategic Role of Metreeca

Metreeca has been working on the Project since the kickoff meeting and has played an important role not just in boosting and supporting all the technical activities but also in coordinating the jobs of the local allies. Metreeca has established itself as a strategic partner for the Alliance, providing invaluable expertise in the design, development, and implementation of complex IT infrastructure solutions. Their deep understanding of our academic needs and technological requirements has been instrumental in the success of numerous deadlines. Several projects, such as the Knowledge Hub, have been built using an efficient framework designed by Metreeca which speeded up the development of many deliverables.

Technical Competences

Metreeca possesses a team of highly skilled and experienced engineers with extensive expertise in the latest infrastructure technologies. They have a proven track record of designing and implementing scalable, secure, and high-performance infrastructure solutions that meet the demanding needs of our Alliance.

Ability to Manage Systems

Metreeca's expertise extends beyond design and implementation to encompass the ongoing management and maintenance of complex infrastructure systems. Their ability to proactively monitor, troubleshoot, and optimize infrastructure performance ensures the seamless operation of our critical IT systems.

Market Uniqueness

Metreeca's combination of technical expertise, strategic understanding, and proven experience sets them apart from other infrastructure providers in the market. Their ability to provide comprehensive infrastructure design, implementation, and management services makes them the ideal partner for the EC2U Project.

Conclusion

Metreeca's strategic role, technical competences, and ability to manage systems make them the most suitable candidate for the design of the infrastructure for the EC2U Project. Their expertise and experience will ensure the successful implementation of a modern, efficient, and scalable infrastructure that will support our Alliance's growth and innovation for years to come.
